PROFESSIONAL SUMMARY

Detail-oriented Full Stack Web Developer with a B.E. in Electronics & Telecommunication Engineering, eager to transition into a Test Engineer role. Possessing a strong understanding of the full software development lifecycle from design to deployment, with hands-on experience building robust MERN applications. My background in developing complex features, including secure authentication, real-time communication, and AI integration, has instilled a keen eye for identifying potential issues and ensuring application quality, making me well-suited for manual and automation testing responsibilities.

SKILLS

technicalSkills: Manual Testing Principles, Functional Testing, Regression Testing, Bug Identification & Reporting, Requirement Understanding, Postman, REST API Design, Responsive UI Design, Git/GitHub, JavaScript (ES6+), React.js, Node.js, Express.js, MongoDB, Mongoose, MySQL, JWT, Email OTP verification, cookie-based sessions, Google Gemini API, LLM-based conversational features, streaming AI responses, Socket.IO, WebRTC, Cloudinary, Multer, HTML5, CSS3, Bootstrap, C, C++

toolsAndFrameworks: React (Vite), Node.js, Express.js, MongoDB, Mongoose, MySQL, Socket.IO, WebRTC, Cloudinary, Multer, JWT, Git/GitHub, Postman, VS Code, Render, Vercel

PROJECTS

AI Chat Application — Full-Stack AI Chat with Gemini

[Live Demo](#) | [GitHub](#)

Developed a full-stack AI chat application leveraging the MERN stack and Google Gemini API for streaming conversational AI responses, with a focus on robust functionality and user experience.

- Implemented secure JWT-based authentication with cookie sessions, ensuring reliable user registration and login flows through systematic testing.
- Designed and integrated persistent chat history, allowing users to create, save, revisit, and delete conversations, validating data integrity and retrieval.
- Developed a responsive chat UI with sidebar navigation, ensuring consistent functionality and display across various devices and browsers.
- Integrated the Google Gemini API for streaming token-by-token AI responses, requiring careful testing of real-time data flow and conversational accuracy.
- Managed full-stack deployment (client + server) as a single service on Render, gaining practical experience in deployment verification and post-deployment testing.
- Utilized MongoDB and Mongoose for efficient data modeling and storage, ensuring reliable persistence of user and chat data.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Mongoose, Google Gemini API, JWT, Cookie-Parser, CORS

VoltBox – Personal Cloud Storage

[Live Demo](#) | [GitHub](#)

Engineered a secure personal cloud storage platform using the MERN stack, focusing on robust file management and data security.

- Developed and tested JWT-based authentication and authorization mechanisms to ensure secure user access and data protection.
- Implemented comprehensive file management functionalities including upload, download, rename, and delete, with thorough testing for data integrity and error handling.
- Designed and validated folder and album management features, ensuring efficient organization and retrieval of user files.
- Created a responsive dashboard for intuitive file organization, verifying usability and display across different screen sizes.
- Integrated Cloudinary for secure cloud file storage, requiring testing of external API interactions and file persistence.
- Ensured all CRUD operations for files and folders were thoroughly tested for correctness and edge cases.

Technologies: React, Node.js, Express.js, MongoDB, Cloudinary, JWT

ChatFlow – Real-Time Chat Application

[Live Demo](#) | [GitHub](#)

Built a full-stack real-time chat application leveraging the MERN stack, Socket.IO, and WebRTC, with a strong emphasis on secure communication and interactive features.

- Implemented secure JWT authentication with Email OTP verification, requiring extensive testing of user registration, login, and access control.
- Developed and tested one-to-one messaging, real-time online/offline status, and typing indicators, ensuring reliable and responsive communication.
- Integrated media and file sharing capabilities using Cloudinary and Multer, validating file uploads, downloads, and secure storage.
- Incorporated voice and video calling functionalities using WebRTC, performing compatibility and performance testing for real-time communication.
- Ensured robust error handling and user feedback mechanisms for all real-time interactions and file operations.
- Utilized Socket.IO for efficient real-time communication, requiring testing of connection stability and message delivery.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Cloudinary, Multer, JWT

Grocery Management System

[Live Demo](#) | [GitHub](#)

Constructed a full-stack inventory and sales management system for grocery stores, focusing on core business logic and data integrity.

- Developed and tested product management, inventory tracking, and sales modules, ensuring accurate data processing and reporting.
- Implemented secure authentication mechanisms, requiring validation of user roles and access permissions.
- Executed comprehensive CRUD operations for products, inventory, and sales records, ensuring data consistency and reliability.
- Designed and built dashboards for monitoring sales and revenue, verifying data accuracy and reporting functionality.
- Utilized MySQL for robust database management, ensuring transactional integrity and data persistence.
- Conducted functional testing to ensure all business rules and workflows were correctly implemented and free of defects.

Technologies: HTML5, CSS3, JavaScript, Node.js, Express.js, MySQL

EDUCATION

Bachelor of Engineering (B.E.), Electronics & Telecommunication Engineering

JSPM's Narhe Technical Campus
