PROFESSIONAL SUMMARY

Detail-oriented Full Stack Web Developer with a B.E. in Electronics & Telecommunication Engineering, eager to transition into Software Testing. Possessing a strong foundation in MERN stack development, I bring a comprehensive understanding of application architecture, functional flows, and system integration, crucial for effective manual and automation testing. My experience in building and deploying robust applications, including those with real-time features and AI integration, provides a unique perspective on identifying defects, ensuring quality, and improving user experience.

SKILLS

technicalSkills: Manual Testing Fundamentals, Functional Testing, Regression Testing, Bug Identification & Reporting, Basic Automation Testing, QA Processes, JavaScript (ES6+), React.js, Node.js, Express.js, REST API Design, MongoDB, MySQL, Responsive UI Design, HTML5, CSS3, C, C++

softSkills: Analytical & Problem-Solving Skills, Attention to Detail, Requirement Understanding, Communication & Teamwork

toolsAndFrameworks: Postman, Git/GitHub, Google Gemini API, Socket.IO, WebRTC, JWT, Cloudinary, Multer, Vite, Mongoose, Bootstrap, VS Code, Render, Vercel, Email OTP verification, cookie-based sessions, LLM-based conversational features, streaming AI responses, prompt design

PROJECTS

AI Chat Application — Full-Stack AI Chat with Gemini

[Live Demo](#) | [GitHub](#)

Built a full-stack AI chat application using React, Vite, Node.js, Express, and MongoDB, integrated with the Google Gemini API for streaming conversational AI responses. Implemented secure JWT-based authentication with cookie sessions for user registration and login. Designed persistent chat history so users can create, save, revisit, and delete past conversations. Built a responsive chat UI with sidebar navigation, mirroring modern AI chat product patterns (e.g., streamed token-by-token responses). Deployed the full stack (client + server) as a single service on Render.

- Engineered and deployed a full-stack AI chat application, demonstrating end-to-end understanding of web application architecture and functionality.
- Implemented robust JWT-based authentication and cookie sessions, ensuring secure user access and data integrity, critical for security testing.
- Designed and validated persistent chat history, requiring thorough testing of data storage, retrieval, and user session management.
- Developed a responsive chat UI, ensuring consistent user experience and functionality across various devices and browsers, a key aspect of UI/UX testing.
- Integrated the Google Gemini API for streaming AI responses, involving complex API integration and performance validation.
- Managed full-stack deployment on Render, gaining insight into deployment pipelines and post-deployment validation.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Mongoose, Google Gemini API, JWT, Cookie-Parser, CORS

VoltBox – Personal Cloud Storage

[Live Demo](#) | [GitHub](#)

Developed a secure personal cloud storage platform using the MERN stack with JWT-based authentication and authorization. Enabled file upload, download, rename, delete, and folder/album management. Designed

a responsive dashboard for efficient file organization and integrated Cloudinary for secure cloud file storage.

- Built a secure personal cloud storage platform, focusing on data integrity, access control, and robust file management operations.
- Implemented JWT-based authentication and authorization, requiring rigorous testing of user permissions and secure data handling.
- Developed comprehensive file management functionalities (upload, download, rename, delete), ensuring all CRUD operations performed as expected.
- Designed a responsive dashboard for file organization, validating UI consistency and usability across different screen sizes.
- Integrated Cloudinary for secure cloud file storage, demonstrating experience with third-party API integration and data security validation.

Technologies: React, Node.js, Express.js, MongoDB, Cloudinary, JWT

ChatFlow – Real-Time Chat Application

[Live Demo](#) | [GitHub](#)

Developed a full-stack real-time chat application using the MERN stack, Socket.IO, and WebRTC.

Implemented secure JWT authentication with Email OTP verification, one-to-one messaging, real-time online/offline status, and typing indicators. Integrated media and file sharing using Cloudinary and Multer, and added voice/video calling using WebRTC.

- Engineered a complex real-time chat application, requiring extensive testing of concurrent user interactions and data synchronization.
- Implemented secure JWT authentication with Email OTP, validating multi-factor authentication flows and user security.
- Developed and tested real-time features such as one-to-one messaging, online/offline status, and typing indicators for responsiveness and accuracy.
- Integrated media and file sharing capabilities, ensuring proper handling of diverse file types and secure storage via Cloudinary and Multer.
- Incorporated WebRTC for voice/video calling, demonstrating experience in testing real-time communication protocols and multimedia functionality.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Cloudinary, Multer, JWT

Grocery Management System

[Live Demo](#) | [GitHub](#)

Built a full-stack inventory and sales management system for grocery stores, with product management, inventory tracking, and sales modules. Implemented secure authentication, CRUD operations, and dashboards for monitoring sales and revenue.

- Developed a full-stack inventory and sales management system, demonstrating a strong understanding of business logic and data flow.
- Implemented secure authentication and authorization, ensuring data integrity and user role-based access.
- Designed and validated comprehensive CRUD operations for product management and inventory tracking, crucial for data accuracy.
- Created interactive dashboards for sales and revenue monitoring, requiring validation of data aggregation and reporting accuracy.
- Managed the full development lifecycle from design to deployment, gaining practical experience in system validation and issue resolution.

Technologies: HTML5, CSS3, JavaScript, Node.js, Express.js, MySQL

EDUCATION

Bachelor of Engineering (B.E.), Electronics & Telecommunication Engineering

JSPM's Narhe Technical Campus
