PROFESSIONAL SUMMARY

Detail-oriented Full Stack Web Developer with a strong foundation in MERN stack applications, eager to transition into a Test Engineer role. Proven ability to build, debug, and deploy robust web solutions, demonstrating a keen eye for identifying issues, ensuring application quality, and validating functionality across various platforms. Possesses practical experience with API testing using Postman and a solid understanding of application architecture, making a valuable contribution to manual and automation testing efforts.

SKILLS

technicalSkills: JavaScript (ES6+), React.js, Node.js, Express.js, MongoDB, REST API Design, Responsive UI Design, Google Gemini API, LLM-based conversational features, streaming AI responses, Socket.IO, WebRTC (voice/video calling), JWT, Email OTP verification, cookie-based sessions, C, C++, HTML5, CSS3, Bootstrap, MySQL

softSkills: Analytical & Problem-Solving Skills, Attention to Detail, Requirement Understanding, Communication & Teamwork

toolsAndFrameworks: Vite, Mongoose, Cloudinary, Multer, Git/GitHub, Postman, VS Code, Render, Vercel

PROJECTS

AI Chat Application — Full-Stack AI Chat with Gemini

[Live Demo](#) | [GitHub](#)

Built a full-stack AI chat application using React, Vite, Node.js, Express, and MongoDB, integrated with the Google Gemini API for streaming conversational AI responses. Implemented secure JWT-based authentication with cookie sessions for user registration and login. Designed persistent chat history so users can create, save, revisit, and delete past conversations. Built a responsive chat UI with sidebar navigation, mirroring modern AI chat product patterns (e.g., streamed token-by-token responses). Deployed the full stack (client + server) as a single service on Render.

- Implemented secure JWT-based authentication with cookie sessions, ensuring robust access control and data security through thorough testing.
- Designed persistent chat history and a responsive UI, requiring validation for data integrity, user experience across devices, and real-time streaming of AI responses.
- Integrated Google Gemini API for streaming conversational AI responses, necessitating validation of AI output accuracy and performance under various loads.
- Deployed the full stack (client + server) on Render, demonstrating end-to-end understanding of application lifecycle and deployment verification.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Mongoose, Google Gemini API, JWT, Cookie-Parser, CORS

VoltBox – Personal Cloud Storage

[Live Demo](#) | [GitHub](#)

Developed a secure personal cloud storage platform using the MERN stack with JWT-based authentication and authorization. Enabled file upload, download, rename, delete, and folder/album management. Designed a responsive dashboard for efficient file organization and integrated Cloudinary for secure cloud file storage.

- Developed a secure personal cloud storage platform with JWT-based authentication and authorization, requiring rigorous security and access control testing.
- Enabled comprehensive file management (upload, download, rename, delete) and folder organization, ensuring data integrity and functionality through extensive testing.
- Integrated Cloudinary for secure cloud file storage, validating reliable file operations and data persistence.
- Designed a responsive dashboard for efficient file organization, ensuring cross-device compatibility and user experience.

Technologies: React, Node.js, Express.js, MongoDB, Cloudinary, JWT

ChatFlow – Real-Time Chat Application

[Live Demo](#) | [GitHub](#)

Developed a full-stack real-time chat application using the MERN stack, Socket.IO, and WebRTC. Implemented secure JWT authentication with Email OTP verification, one-to-one messaging, real-time online/offline status, and typing indicators. Integrated media and file sharing using Cloudinary and Multer, and added voice/video calling using WebRTC.

- Implemented secure JWT authentication with Email OTP verification, ensuring robust user security and account integrity through testing.
- Developed real-time one-to-one messaging, online/offline status, and typing indicators using Socket.IO, requiring extensive real-time functionality testing.
- Integrated WebRTC for voice/video calling and Cloudinary/Multer for media/file sharing, necessitating comprehensive testing of real-time communication and media handling.
- Ensured application stability and performance under various network conditions, validating real-time features.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Cloudinary, Multer, JWT

Grocery Management System

[Live Demo](#) | [GitHub](#)

Built a full-stack inventory and sales management system for grocery stores, with product management, inventory tracking, and sales modules. Implemented secure authentication, CRUD operations, and dashboards for monitoring sales and revenue.

- Built a full-stack inventory and sales management system with secure authentication and CRUD operations, requiring thorough functional and security testing.
- Implemented product management, inventory tracking, and sales modules, ensuring data accuracy and system reliability through validation.
- Designed dashboards for monitoring sales and revenue, necessitating data integrity and reporting accuracy checks.
- Deployed on Vercel, demonstrating full application lifecycle management and deployment verification.

Technologies: HTML5, CSS3, JavaScript, Node.js, Express.js, MySQL

EDUCATION

Bachelor of Engineering (B.E.), Electronics & Telecommunication Engineering

JSPM's Narhe Technical Campus
