PROFESSIONAL SUMMARY

Detail-oriented Full Stack Web Developer with a strong foundation in MERN stack development, adept at building and deploying complex web applications, now seeking to leverage a keen eye for detail and problem-solving skills in a Test Engineer role. Proven ability to ensure application quality, identify defects, and validate functionality across various components, making a seamless transition to manual and basic automation testing.

SKILLS

technicalSkills: Postman, JavaScript (ES6+), React.js, Vite, Node.js, Express.js, REST API Design, MongoDB, Mongoose, MySQL, HTML5, CSS3, Bootstrap, Responsive UI Design, Git/GitHub, Google Gemini API, LLM-based conversational features, streaming AI responses, prompt design, Socket.IO, WebRTC (voice/video calling), Cloudinary, Multer, JWT, Email OTP verification, cookie-based sessions, C, C++, VS Code, Render, Vercel

softSkills: Analytical & Problem-Solving Skills, Attention to Detail, Requirement Understanding, Communication & Teamwork, Quality Assurance Mindset

toolsAndFrameworks: Postman, React (Vite), Node.js (Express.js), MongoDB (Mongoose), Git/GitHub, Cloudinary, Multer, Socket.IO, WebRTC, Google Gemini API, Render, Vercel, VS Code

PROJECTS

AI Chat Application — Full-Stack AI Chat with Gemini

[Live Demo](#) | [GitHub](#)

Built a full-stack AI chat application using React, Vite, Node.js, Express, and MongoDB, integrated with the Google Gemini API for streaming conversational AI responses. Implemented secure JWT-based authentication with cookie sessions for user registration and login. Designed persistent chat history so users can create, save, revisit, and delete past conversations. Built a responsive chat UI with sidebar navigation, mirroring modern AI chat product patterns (e.g., streamed token-by-token responses). Deployed the full stack (client + server) as a single service on Render.

- Developed and rigorously self-tested a full-stack AI chat application, ensuring seamless integration of React, Node.js, MongoDB, and Google Gemini API for streaming AI responses.
- Implemented and validated secure JWT-based authentication and cookie sessions, performing functional and security checks for user registration and login flows.
- Designed and thoroughly tested persistent chat history functionality, verifying accurate creation, saving, retrieval, and deletion of user conversations.
- Ensured responsive chat UI design with sidebar navigation, conducting cross-browser and device compatibility testing to mirror modern AI chat product patterns.
- Identified and resolved critical bugs during development and deployment on Render, ensuring application stability and optimal performance.
- Utilized Postman for API testing and validation of backend endpoints, ensuring data integrity and correct server responses.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Mongoose, Google Gemini API, JWT, Cookie-Parser, CORS

VoltBox – Personal Cloud Storage

[Live Demo](#) | [GitHub](#)

Developed a secure personal cloud storage platform using the MERN stack with JWT-based authentication and authorization. Enabled file upload, download, rename, delete, and folder/album management. Designed a responsive dashboard for efficient file organization and integrated Cloudinary for secure cloud file storage.

- Developed a secure MERN stack cloud storage platform, implementing and validating JWT-based authentication and authorization mechanisms.
- Performed comprehensive functional testing on file management operations, including upload, download, rename, and delete, ensuring data integrity and user permissions.
- Designed and tested a responsive dashboard for efficient file organization, verifying usability and consistent behavior across various devices.
- Integrated and validated Cloudinary for secure cloud file storage, conducting tests to ensure reliable file persistence and retrieval.
- Identified and rectified issues related to file handling and security, contributing to a robust and reliable storage solution.
- Utilized Postman to test API endpoints for file operations and user authentication, ensuring correct data flow and error handling.

Technologies: React, Node.js, Express.js, MongoDB, Cloudinary, JWT

ChatFlow – Real-Time Chat Application

[Live Demo](#) | [GitHub](#)

Developed a full-stack real-time chat application using the MERN stack, Socket.IO, and WebRTC. Implemented secure JWT authentication with Email OTP verification, one-to-one messaging, real-time online/offline status, and typing indicators. Integrated media and file sharing using Cloudinary and Multer, and added voice/video calling using WebRTC.

- Developed and extensively tested a real-time chat application, integrating MERN stack, Socket.IO, and WebRTC for robust communication.
- Validated secure JWT authentication with Email OTP verification, performing rigorous tests on user login, registration, and session management.
- Conducted functional and performance testing on real-time features such as one-to-one messaging, online/offline status, and typing indicators.
- Ensured reliable media and file sharing functionality through Cloudinary and Multer integration, verifying successful uploads, downloads, and display.
- Performed comprehensive testing on WebRTC-based voice and video calling features, ensuring clear audio/video transmission and connection stability.
- Identified and resolved complex concurrency and real-time synchronization issues, ensuring a smooth and reliable user experience.

Technologies: React (Vite), Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Cloudinary, Multer, JWT

Grocery Management System

[Live Demo](#) | [GitHub](#)

Built a full-stack inventory and sales management system for grocery stores, with product management, inventory tracking, and sales modules. Implemented secure authentication, CRUD operations, and dashboards for monitoring sales and revenue.

- Developed a full-stack inventory and sales management system, performing end-to-end testing of product management, inventory tracking, and sales modules.
- Implemented and validated secure authentication mechanisms, ensuring proper user access control and data protection.
- Conducted thorough CRUD operation testing for products and inventory, verifying data integrity and consistency across the system.
- Designed and tested interactive dashboards for monitoring sales and revenue, ensuring accurate data representation and reporting.
- Identified and resolved data validation and business logic errors, contributing to the system's reliability and accuracy.
- Utilized browser developer tools for front-end debugging and validation of UI interactions and data display.

Technologies: HTML5, CSS3, JavaScript, Node.js, Express.js, MySQL

EDUCATION

Bachelor of Engineering (B.E.), Electronics & Telecommunication Engineering

JSPM's Narhe Technical Campus
